

Guide node contains metadata that instructs Rigbox on:

- Which joint/control scripts to run.
- Pass on data like transforms, names, etc. to those scripts.

Guides are modular components that can be parented to one another in order to build humanoid rigs.

After a guide template is added to the Maya Viewport, it will show up in the Elements widget where it's hierarchy, and name can be altered.

The Metahuman Guide builds a UE5 Mannequin skeleton and functional control rig.

The Camera Guide builds a camera rig.
